# Outline

1. Introduction: Motivation, Background & Objectives
2. Methods: Integrating the geopolitical supply risk  
in life cycle assessment
3. Case study
4. Conclusions

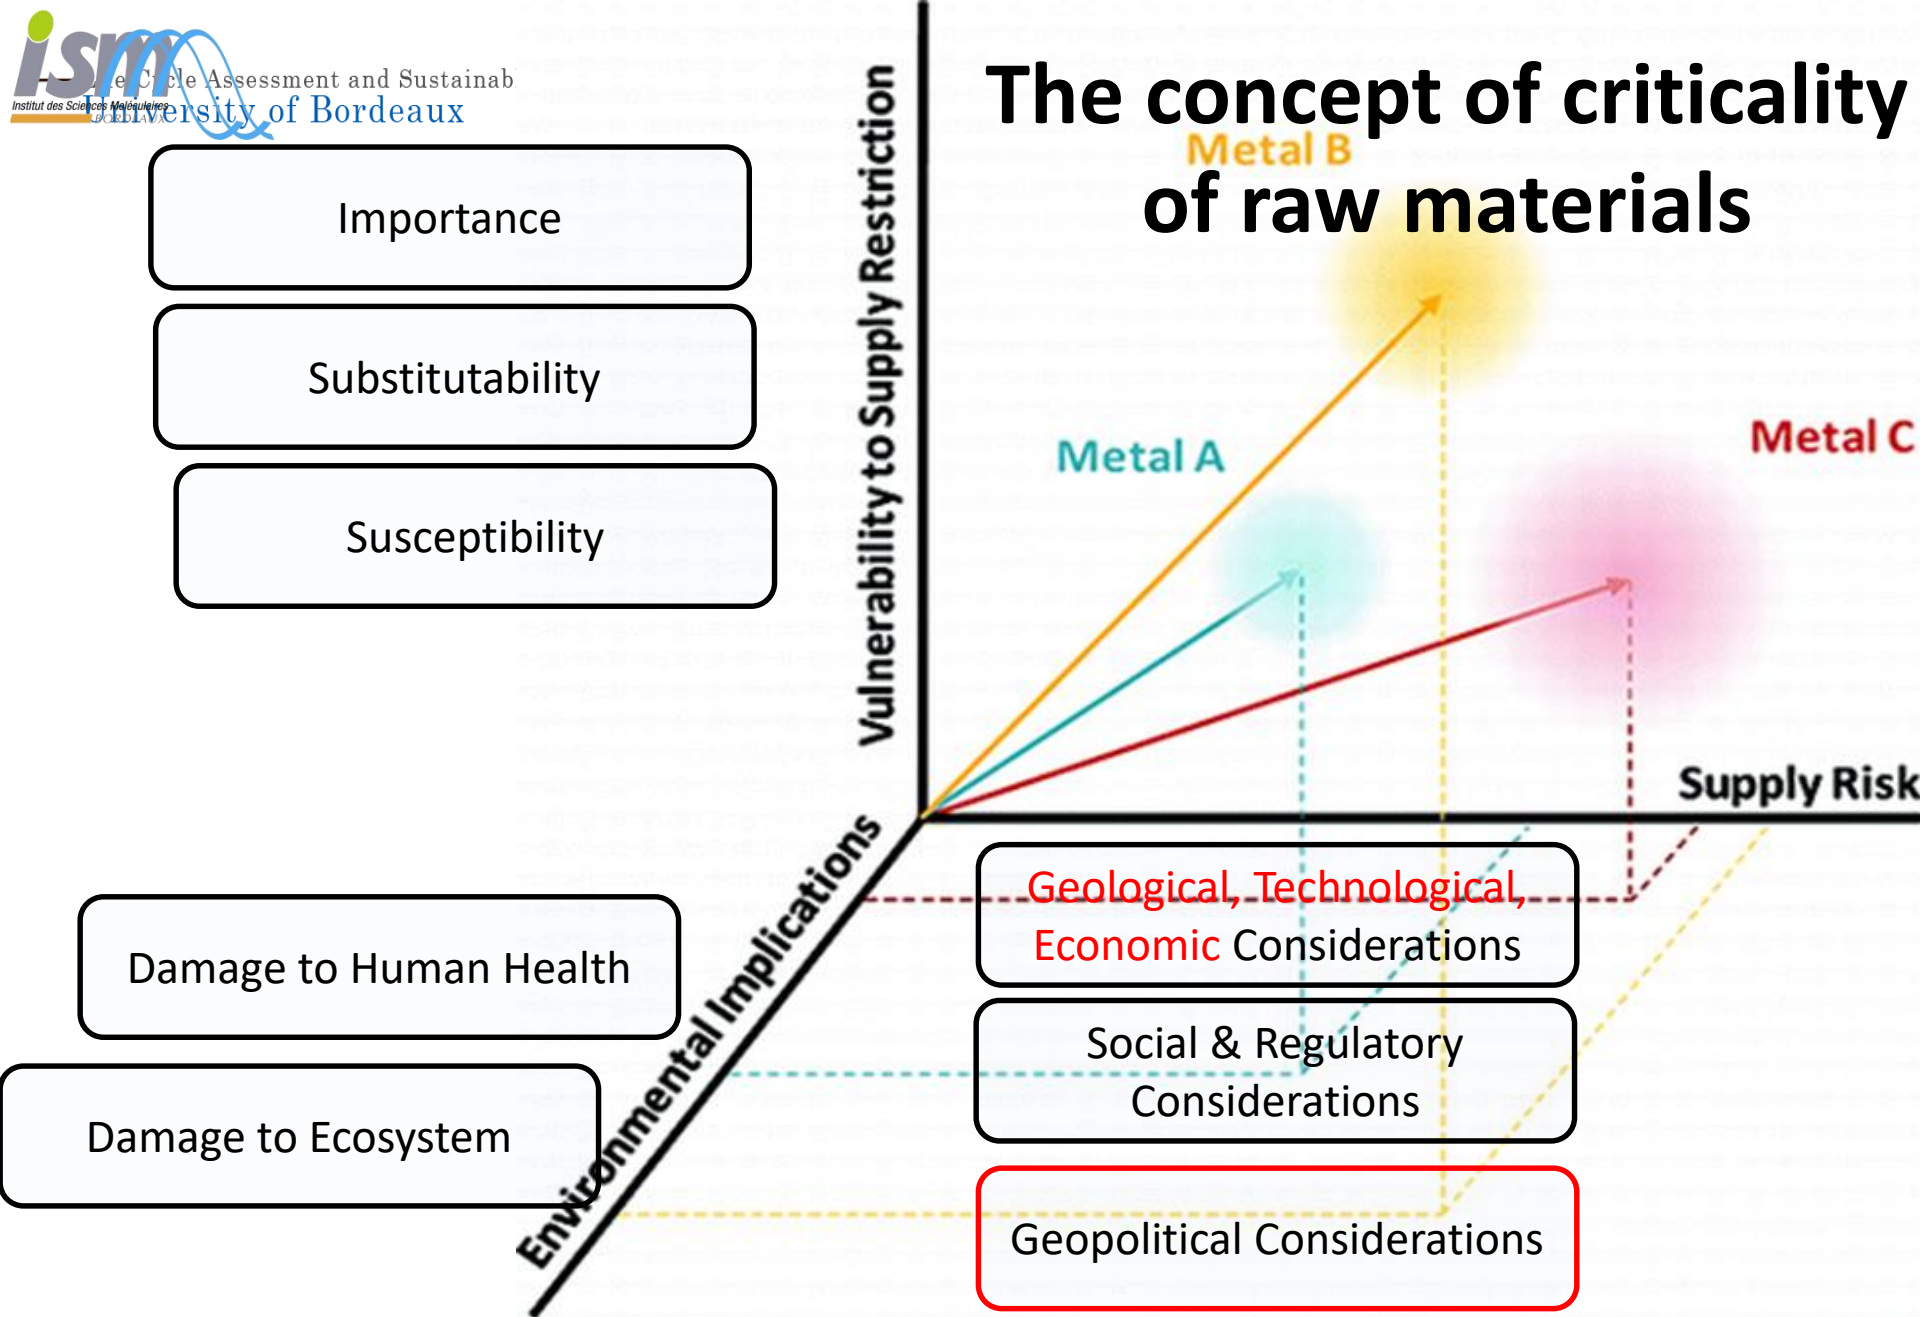

# 1. Introduction:

## Motivation, Background & Objectives

# The concept of criticality of raw materials

Source : Graedel 2012

# Introduction: Objectives

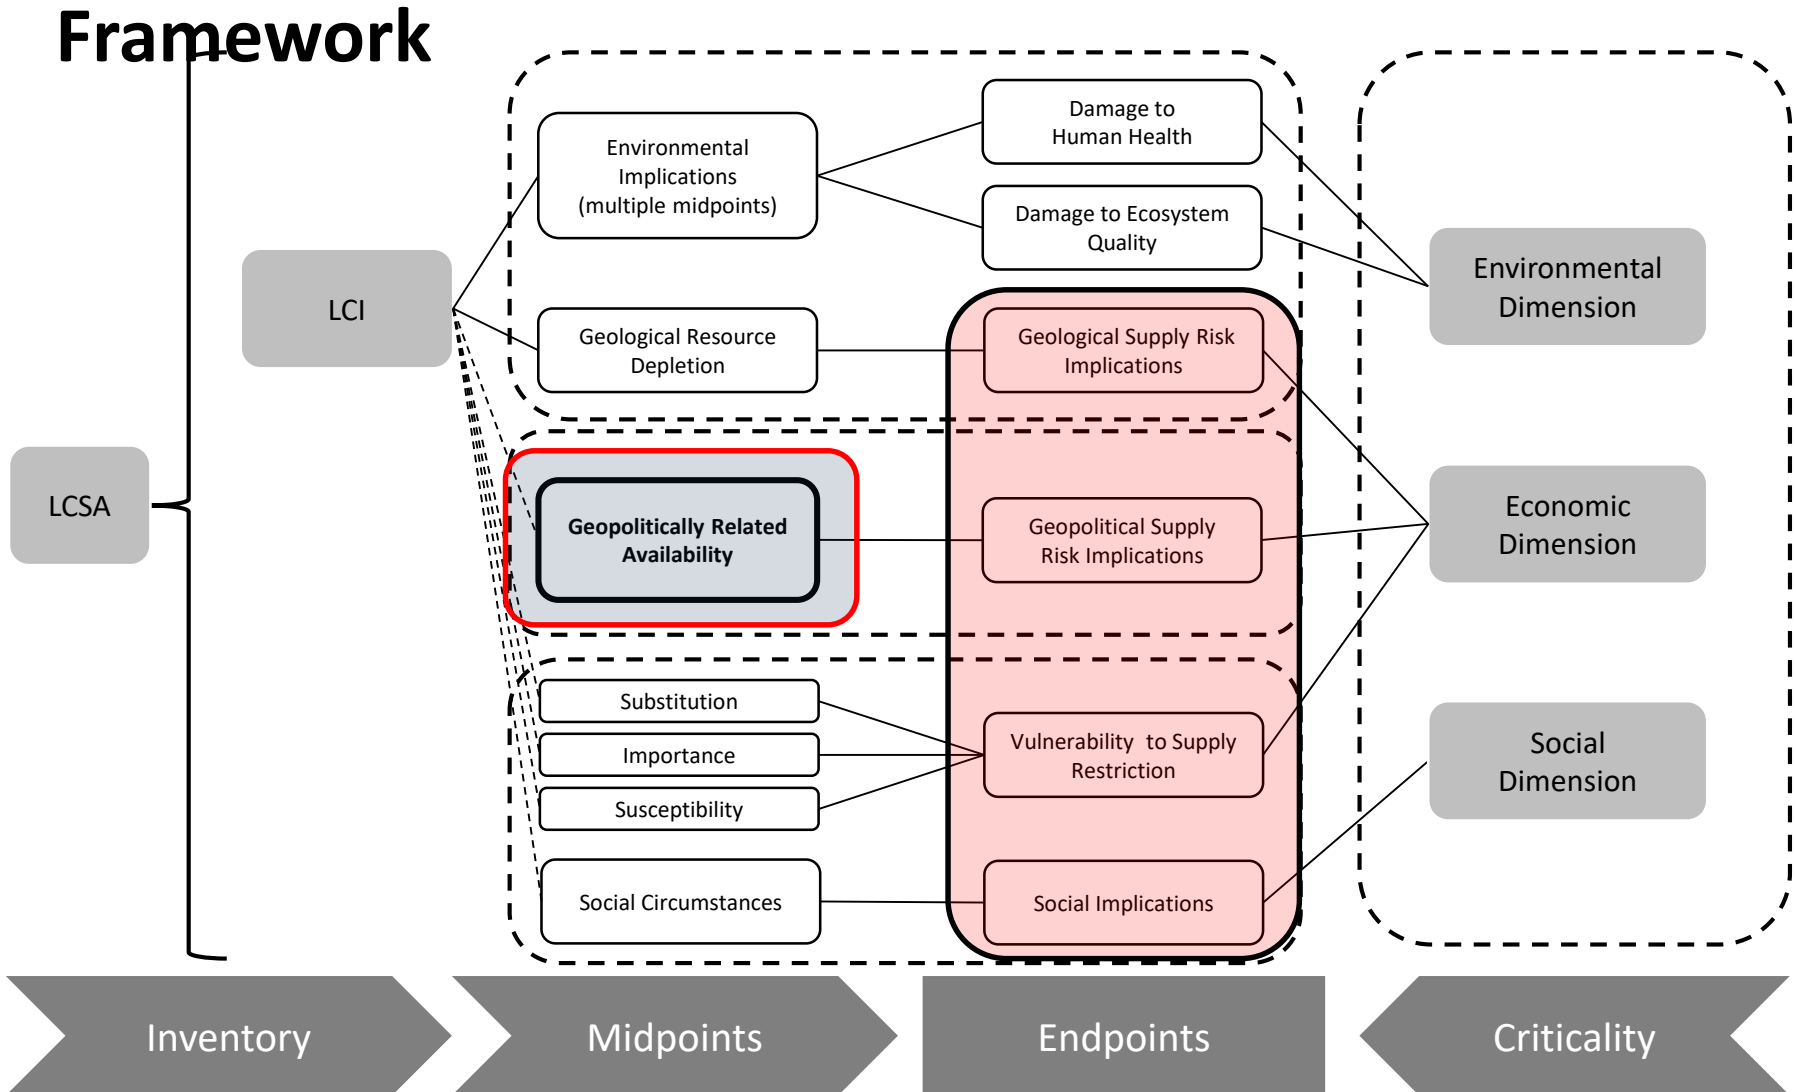

- **Explain** first steps on how to integrate the geopolitical supply risk as a complementary dimension in the life cycle assessment of abiotic resources
- **Use** a case study of an electric vehicle as an example to illustrate the value of this integration

## 2. Methods:

# Integrating the geopolitical supply risk in life cycle assessment

# LCSA – for Resource Criticality

Sonnemann et al., 2015

## Geopolitical related supply risk

### Integrating geopolitical supply risk in LSCA

$$SR_{c,i} = \left[ \left( \sum_{k=1}^n s_k^2 \right) * \left( \sum_{k=1}^n g_k * f_{i,k} \right) \right]$$

- $s_k$  is the share of country  $k$  in the global production (mining or refining) of the commodity  $c$ .
- $g_k$  is the political instability indicator of country  $k$ .
- $f_{i,k}$  is the import share of country  $k$  in the supply-chain of country  $i$ .

**GeoPolRisk** is expressed as a socio-economic risk oriented midpoint indicator with values between 0 and 1

Gemechu et al., 2015

# Resource “criticality” ...

- “Supply risk” (actually probability)
- “Vulnerability” to supply disruption

$$\textit{Supply Risk} = \textit{Probability} \times \textit{Vulnerability}$$

Glöser et al. 2015. Resour. Policy.  
DOI:10.1016/j.resourpol.2014.12.003

# ...on a product-level

**Periodic Table**

The Royal Society of Chemistry's interactive periodic table features history, alchemy, podcasts, videos, and data trends across the periodic table. Click the tabs at the top to explore each section. Use the buttons above to change your view of the periodic table and view Murray Robertson's stunning Visual Elements artwork. Click each element to read detailed information.

# Geopolitical Supply Risk (GPSR)

$$GPSR_{APc} = m_{APc} \times CF_{APc}$$

$$CF_{APc} = GeoPol_{Ac} \times Vuln_{APc}$$

Where

- $GPSR_{APc}$  = Geopolitical Supply Risk for commodity A needed to produce product P in country c
- $m_{APc}$  = amount of commodity A needed to produce product P in country c
- $GeoPol_{Ac}$  = probability of supply disruption of commodity A in country c
- $Vuln_{APc}$  = vulnerability indicator for commodity A needed to produce product P in country c

Cimprich et al. 2017. J. Cleaner Prod.  
DOI: 10.1016/j.jclepro.2017.06.063

# Geopolitical Supply Risk (GeoPol, 1-stage)

$$GeoPol_{Ac} = HHI_A \sum_i g_i \frac{f_{Aic}}{p_{Ac} + F_{Ac}}$$

Where

- $HHI_A$  = production concentration of commodity A → **USGS**
- $g_i$  = political (in)stability of producing country i → **WGI**
- $f_{Aic}$  = imports of commodity A from country i to country c → **UN Comtrade**
- $p_{Ac}$  = domestic production of commodity A → **USGS**
- $F_{Ac}$  = total imports of commodity A to country c → **UN Comtrade**

Helbig et al. 2016. J. Cleaner Prod.  
DOI: 10.1016/j.jclepro.2016.07.214

# Geopolitical Supply Risk (GPSR)

$$Vuln_{APC} = PI_{APC} \times Sub^{-1}_{APC}$$

Where

- $PI_{APC}$  = “product-level importance,”  $PI_{APC} = \frac{1}{m_{APC}}$
- $Sub^{-1}_{APC}$  = “substitutability” based on Graedel et al. 2015 (PNAS)

Cimprich et al. 2017. J. Cleaner Prod.

DOI: 10.1016/j.jclepro.2017.06.063

\*\*\*Note: “substitutability” factor not published\*\*\*

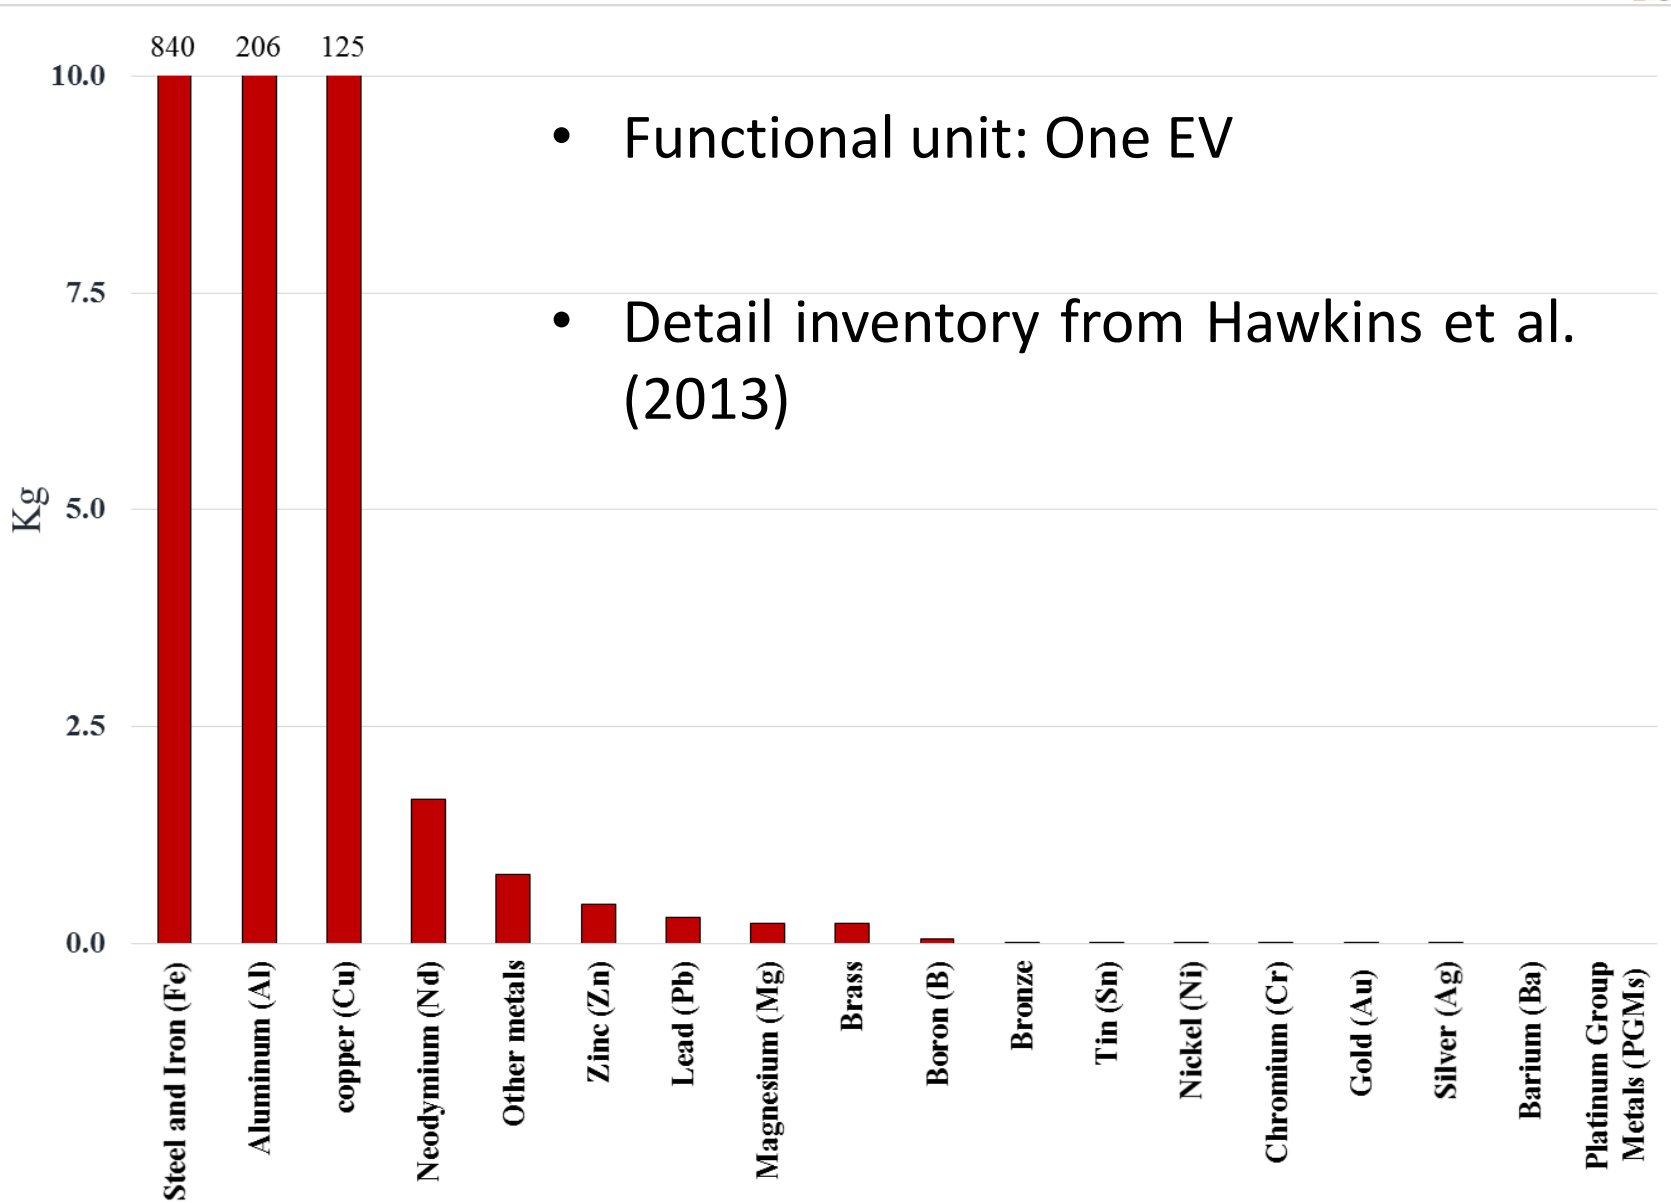

## 3. Case study

# Results of integrating criticality into LC(S)A

Critical raw materials in an electric vehicle

# Mass of metals in an electric vehicle

- Functional unit: One EV
- Detail inventory from Hawkins et al. (2013)

# Methods and Materials for Environmental Impact Assessment

- LCA software: SimaPro
- LCI database: ecoinvent v3.1
- LCIA method: ReCiPe midpoint
- Impact categories
  - Global Warming Potential
  - Metal Depletion Potential
  - Human Toxicity Potential
  - Freshwater Eco-toxicity Potential
- System boundaries:  
No use phase and No end-of-life

## Case study published

**Minority statement!**

# Conclusions

- Criticality assessment of resources and LCA for products have a complimentary nature.
- Integrating criticality into LCSA is **useful** to compare trade-offs with environmental impact categories and **feasible** as shown with our first steps for **GeoPol and GPSR**
- Data generated for LCA provide a lot basic information on resource use that can be used in this way.
- Life Cycle Inventories need to become more geographically explicit to be more relevant (similar to water).
- The GeoPol and GPSR methods have **limitations**, some of them are currently addressed in research to cover recycling.
- More work is needed to address **all dimensions** of criticality.
